

Hitachi – Competence in oil-less compression

Düsseldorf, April 2013. Hitachi Industrial Components & Equipment Group presented at COMVAC 2013 its full lineup of oil-free compressors. Hitachi compressors, manufactured with rigorous industry standards and methodologies and backed by its proven experience, meet the needs of the most exigent industries.

Hitachi supplies Scroll air-ends to European OEM manufacturers which develop their own packages based on Hitachi technology. Low vibration, high reliability and long maintenance systems can be achieved using Hitachi's Scroll air-ends.

These characteristics make them ideal for applications such as laboratories, medical air, gas generation or water treatment.

On the other hand, Hitachi has also recently introduced in the European market its LE Series Oil-free reciprocating compressors. LE Series is oriented to high quality applications where low noise and long overhaul intervals (up to 8,000 hours at 0.8MPa) are key factors.

Thanks to its compact housing (air-end and motor) LE Series are the perfect solution for those who are looking for top quality oil-free compressors to integrate in their system.
